

CITY OF SYDNEY

HUB manages and maintains the Smart Controlled street lighting, Feature Lighting, Beacon lighting and Christmas Star lighting through the e³ IoT Data Management & Analytics platform for the City of Sydney along the light rail corridor on George Street and Circular Quay. HUB designed, manufactured and installed over 800 smart controlled lights as part of this iconic project. HUB's e³ platform allows the City to control the LEDs, changing the colours of the Beacon and Christmas star and collect data on the LEDs performance. This managed and integrated approach has transformed the City's CBD.
